

Washington Gas and the U.S. Consumer Product Safety Commission recommend annual safety inspections of your natural gas appliances by a qualified technician. Have a technician fill out the following form when conducting your annual inspection, using the comments section to note any issues found during the inspection.

SAFETY CHECKS A QUALIFIED TECHNICIAN SHOULD MAKE

Date: ____ / ____ / ____

Company Name: _____

Technician Name: _____

Phone Number: ____ - ____ - ____

Inspection Date: ____ / ____ / ____

APPLIANCE INFORMATION: FURNACE/BOILER WATER HEATER RANGE OTHER

Manufacturer:

Model Number:

Access and Fire Safety:

Gas/Air Adjustment:

Carbon Monoxide Test:

Gas Controls & Safeties:

Combustion & Ventilation Air:

Heat Exchanger Inspection:

Comments :

SAFETY CHECKS YOU CAN MAKE

Furnace Air Filters

Clean filters (if permanent) or replace them regularly. Inspect them monthly.

HOT WATER TEMPERATURE

To prevent scalds from hot tap water, set your water heater thermostat to 120 °F.

Flammable Liquid Storage

Never store materials that may produce flammable vapors-such as painting materials, cleaning solvents, gasoline cans and oily rags-near a gas appliance or in the same room.

Carbon Monoxide Alarms/Detectors Installed

The U.S. Consumer Product Safety Commission recommends that Carbon Monoxide (CO) alarms/detectors be installed in homes near sleeping areas.
