

* NOTICE * STAY ALERT!

Washington Gas is performing construction within the utility corridor crossing Rosaryville State Park. Construction activities are expected to be complete by late summer 2021.

No park closures are anticipated as a result of this work, although visitors will see a substantial amount of construction equipment being moved around the site including on roadways in the park.

Please pay attention to all construction signs, follow instructions of flaggers, and do not cross construction barriers—they are there for your safety.

Trails crossing the utility corridor, including the Perimeter Trail, will be closed at the utility corridor at times when construction is occurring in the immediate vicinity and a safe and practical detour is not available. Other portions of the trails will remain open.

Please see closure information above and for up-to-date trail crossing closure information related to this construction activity, **visit www.pgcdcrp.com/news-and-media**. Please check trail closure information and plan your trail use accordingly. Thank you for your cooperation!

Michelle Aikman, Community Engineer; Theresa Curtis, Project Engineer
